

# AKSHATA JADHAV

Python Developer | Full Stack Engineer | AI & LLM Enthusiast  
+91 9403327227 | akshatajadhav7902@gmail.com | Pune, Maharashtra

## PROFESSIONAL SUMMARY

Results-driven Python Developer with 1+ year of professional experience building scalable full-stack web applications using Python, Django, FastAPI, and React. Proven ability to integrate AI and LLM technologies into production systems. Experienced in REST API development, JWT authentication, relational databases (MySQL, MongoDB), and cloud deployment. Strong foundation in data structures, algorithms, and software development life cycle (SDLC).

## TECHNICAL SKILLS

|                       |                                                                     |
|-----------------------|---------------------------------------------------------------------|
| Programming Languages | Python, JavaScript, Java, SQL                                       |
| Backend               | FastAPI, Django, Django REST Framework, Flask, REST API, JWT, OAuth |
| Frontend              | React.js, Vite, HTML5, CSS3, Bootstrap                              |
| Databases             | MySQL, MongoDB, SQLite, SQLAlchemy ORM                              |
| AI / LLM              | Groq API, OpenAI API, LangChain, Ollama, Llama3, Prompt Engineering |
| Data Science          | Pandas, NumPy, Matplotlib, OpenCV, face_recognition                 |
| Tools                 | Git, GitHub, VS Code, Postman                                       |

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Full Stack Web Developer</b> —<br>ONE IT Solutions Private Limited                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Aug 2023 – Sep 2024 |
| <ul style="list-style-type: none"><li>Developed and maintained dynamic web applications using Python, Django, Django REST Framework, and REST APIs serving production users</li><li>Implemented JWT and OAuth authentication systems, improving application security and user session management</li><li>Managed relational and non-relational databases (MySQL, SQLite, MongoDB) ensuring data integrity and optimized query performance</li><li>Collaborated with cross-functional teams across the full SDLC — from requirement analysis and design to testing and deployment</li><li>Translated business requirements into efficient, scalable Python code reducing manual processing time</li></ul> |                     |

## PROJECTS

## DB Chatbot — AI-Powered Natural Language Database Interface | [React](#), [FastAPI](#), [Python](#), [MySQL](#), [Groq AI](#), [JWT](#)

- Engineered a Natural Language to SQL engine using Groq Llama3 LLM that converts plain English questions into executable MySQL queries, eliminating manual SQL knowledge requirements
- Built secure REST API with FastAPI including JWT authentication, bcrypt password hashing, and role-based protected routes
- Implemented Voice-to-SQL feature using Web Speech API enabling hands-free database querying via voice commands

- Developed real-time dashboard in React with auto-refresh every 30 seconds showing live DB stats, city distribution charts, and monthly signup graphs
- Added Undo/Rollback system that captures reverse SQL before every INSERT, UPDATE, DELETE operation for safe one-click data recovery
- Implemented SQL query caching to avoid redundant LLM API calls, reducing average response time significantly
- **GitHub:** <https://github.com/akshatajadhav79/db-chatbot>

### Build Foridge — Real Estate Web Application | [Python](#), [Django](#), [MySQL](#)

- Built a full-featured real estate platform inspired by 99acres enabling property listings, advanced search, and direct client-engineer communication
- Engineered a portfolio system for civil engineers to showcase work and send quotations directly to clients
- Implemented communication modules facilitating direct interaction between clients, engineers, and builders
- **Live:** <https://akshata05.pythonanywhere.com>

### Facial Recognition Attendance System | [Python](#), [OpenCV](#), [NumPy](#), [Pandas](#), [face\\_recognition](#)

- Developed a Python-based attendance system using OpenCV and face\_recognition library to automate attendance tracking
- Utilized NumPy for numerical operations on image arrays and Pandas for managing and analyzing attendance logs
- Implemented facial encoding and comparison algorithms to accurately identify individuals against a known database
- **GitHub:** <https://github.com/akshatajadhav79/FaceCheck-App>

### Wedding Planner — Event Management Application | [Django](#), [MySQL](#), [Bootstrap](#)

- Built a Django web application for event planning enabling users to browse and book vendors including caterers and photographers
- Designed user-friendly booking system with secure vendor profile management and booking history tracking
- **GitHub:** <https://github.com/akshatajadhav79/Wedding-Planner>

## EDUCATION

---

### Master of Computer Application (MCA)

Savitribai Phule Pune University, Pune

**SGPA: 8.58**

Aug 2024 – Jul 2026

### Bachelor of Computer Application (BCA)

Shivaji University

**83.69%**

Jun 2021 – Apr 2024

### H.S.C — Maharashtra State Board

Pune

**86.50%**

Jun 2019 – Feb 2021

### S.S.C — Maharashtra State Board

Pune

**89.00%**

Mar 2019

## AWARDS & ACHIEVEMENTS

---

- 1st Prize — College Level Hackathon: Recognized for excellence in problem-solving and application development using Python, Java, and JavaScript
- Maintained consistent academic excellence across BCA (83.69%), HSC (86.50%), and SSC (89.00%)
